

# Python list (array) and basic structure of array

AIE 311 : Data structure and Algorithm

# What is array

- Array is a set of data
- Need to allocate specific size
- Need to define type of array (String, Character, Integer, Floating point, etc.,)
- Cannot mixed multiple array type (String + Integer in the same array)

# What is list (array in Python)

- List is a set of data
- No need to allocate specific size
- No need to define type of array (String, Character, Integer, Floating point, etc.,)
- Can mixed multiple array type (String + Integer in the same array)
